

MOHAMED AFZAL R

Full Stack Developer

Chennai, India • rafzal0606@gmail.com • linkedin.com/in/mohamedafzalr • github.com/Afzalmax

PROFESSIONAL SUMMARY

Impact-oriented Full Stack Developer with 1+ year of professional experience building enterprise-grade SaaS products across the FinTech and HRTech domains. Demonstrated progression from engineering intern to full-time contributor, owning backend infrastructure, event-driven architectures, and asynchronous processing pipelines at a product subsidiary before driving frontend architecture, third-party integrations, and CI/CD automation at the parent organization. Recognized with Employee of the Month for delivering mission-critical infrastructure ahead of sprint commitments.

WORK EXPERIENCE

Software Engineer – HRTech Product

Aug 2025 – Present

Ncompass TechStudio Private Ltd | Chennai, India

Parent organization of Power of N • Product: Enterprise HR Management Platform

- **Led a team of 7 developers**, overseeing task allocation, sprint planning, code reviews, and engineering governance — ensuring on-time delivery and adherence to coding standards across the product
- Spearheaded frontend development of the **HR Management Platform using React.js and Material UI**, delivering a modular component library reused across 8+ feature modules including payroll, attendance, and recruitment
- Developed an end-to-end **payroll processing module** supporting configurable pay cycles, CTC breakdowns, and automated PDF payslip generation, serving **100+ employees monthly**
- Integrated **Slack API** for real-time clock-in/clock-out notifications, improving attendance visibility by ~35% and reducing manual follow-ups for HR managers
- Built configurable **shift scheduling, weekoff assignment, and holiday planning systems**, supporting multi-department policies and reducing administrative overhead by an estimated 45%
- Implemented internal engagement features — **polls, organizational posts, and employee recognition feeds** — driving measurable increase in platform adoption across the organization
- Established a **centralized UI style guide and theming architecture**, enforcing design consistency and reducing UI-related defects by ~40%
- Designed a **custom CI/CD pipeline** automating multi-branch synchronization post-merge, eliminating ~70% of manual conflict resolution during parallel feature development
- Introduced **repository scaffolding architecture** and decoupled the authentication layer into a standalone sub-repository, accelerating developer onboarding by ~50% and enabling cross-product reuse across 3 internal projects
- Designed and maintained **PostgreSQL database schemas** for the HR platform, optimizing complex queries across employee, payroll, attendance, and shift modules to ensure performant data retrieval at scale

Tech Stack: React.js, Material UI, Redux, Slack API, Git, CI/CD Pipelines, REST API Integration

Software Engineer – FinTech Product

Apr 2025 – Aug 2025

Power of N TechStudio Private Ltd | Chennai, India

Subsidiary of Ncompass TechStudio • Product: Enterprise Financial Management System • Promoted from Intern

- **Led a cross-functional team of 7 developers**, driving task prioritization, code review governance, and quality assurance across the FinTech product — consistently delivering sprint commitments on schedule
- Architected an **asynchronous report generation pipeline using RabbitMQ**, enabling parallel processing that reduced chartered accountant report turnaround from minutes to seconds (~60% improvement)
- Engineered a production-grade **notification and reminder engine leveraging Celery Beat and Elasticsearch**, processing 300+ scheduled alerts daily with near real-time delivery and full auditability via Kibana dashboards

- Designed and optimized **40+ RESTful API endpoints** powering core financial workflows — transaction logging, multi-currency foreign exchange handling, ledger reconciliation, and account-contact mapping
- Implemented **automated balance tallying and reconciliation logic**, reducing manual verification effort for chartered accountants by an estimated 70%
- Built a **consumer-driven report dispatch system** that generates and delivers financial reports asynchronously via RabbitMQ, ensuring zero blocking on the client side
- Authored a **GCP VM startup script** that auto-provisions tmux sessions and initializes Celery Beat and Celery Worker processes on boot, eliminating manual server reconfiguration after VM restarts and reducing deployment downtime to near zero
- Designed **normalized PostgreSQL table schemas** and authored optimized queries for transaction ledgers, account hierarchies, and foreign exchange records, ensuring data integrity and efficient retrieval across high-volume financial operations

Recognition: Awarded **Employee of the Month** for delivering the notification and reminder infrastructure 1 week ahead of sprint deadline

Tech Stack: Django, Django REST Framework, PostgreSQL, RabbitMQ, Celery Beat, Elasticsearch, Kibana, GCP

Software Engineering Intern – FinTech Product

Sep 2024 – Mar 2025

Power of N TechStudio Private Ltd | Chennai, India

Subsidiary of Ncompass TechStudio • Product: Enterprise Financial Management System

- Contributed to the development of the **Financial Management System**, building backend services for transaction tracking, account management, and contact-ledger associations under senior developer mentorship
- Developed and tested **RESTful API endpoints** for multi-currency foreign exchange operations, ensuring data integrity across financial entities
- Collaborated with cross-functional stakeholders to translate **complex accounting requirements** into scalable backend services supporting multi-entity financial operations
- Gained hands-on proficiency in **Django, PostgreSQL, and distributed system fundamentals** (RabbitMQ, Celery), laying the foundation for subsequent full-time contributions

Tech Stack: Django, PostgreSQL, Python, REST APIs, Git

EDUCATION

Bachelor of Engineering – Computer Science

Nov 2021 – May 2025

Velammal Engineering College | Chennai, India

CGPA: 8.28 / 10.0

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, HTML5, CSS3, SQL

Frontend: React.js, Material UI, Redux, Component-Driven Architecture, Responsive Design

Backend: Django, Django REST Framework, RESTful API Design, Asynchronous Processing

Databases & Search: PostgreSQL, Elasticsearch, Kibana

Message Brokers: RabbitMQ, Celery, Celery Beat

DevOps & Cloud: Git, CI/CD Pipelines, Google Cloud Platform

Integrations: Slack API, Third-Party Webhooks

Methodologies: Agile/Scrum, Code Review, Cross-Functional Collaboration
